2.40 (b) (2)

DIRECT NCI

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

Both eyes of an adult blonde colored female Shi-Tzu identified by microchip (001-871-364) are abnormal in appearance. The right eye is cloudy with a light blue color and the pupil cannot be visualized. Both eyes are mattery and have a greenish yellow discharge coming from them. There is a dry crusty material matted in the fur around both eyes.

An adult fawn colored female Pug identified by microchip (0A02456273), also has eyes with an abnormal appearance. The eyes appear enlarged and cloudy. There is a greenish-yellow discharge coming from both eyes. The left eye has a dark brown layer of dry crusty material covering most of the surface. The licensee stated that he noticed the problems a few weeks ago but has not yet consulted a veterinarian.

Eye disease can be caused by a variety of problems including infection, allergies, injury, irritation or other medical conditions and can be painful. Both dogs must be examined by a licensed veterinarian and appropriate treatment plan administered. Documentation should be available on all medical problems. The diagnosis and any treatment plan must be part of the documentation. The licensee must ensure that all animals receive adequate veterinary care at all times.

EYES

Chewed

To be corrected by: October 31, 2015.

3.1 (c) (2)

HOUSING FACILITIES, GENERAL.

Maintenance and replacement of surfaces.

The enclosures in the white northeast sheltered housing facility are constructed partially of wood. The wooden areas in the enclosures where the dogs come in contact with have not been painted or sealed and have not been made impervious to moisture.

The outdoor facility containing German Shepherds has wooden supports in the outdoor runs that have been severely chewed. At least two of the supports have been chewed in half. The wooden flooring inside the building where the dogs come in contact with is worn and absorbing liquid. The licensee stated he is currently working on updating the building. The tin sheets attached to the outside north wall along the bottom of the dog runs are rusty and creating sharp points. The northwest outdoor housing area containing one German Shepherd has a wooden shelter that is worn and damaged along the bottom left side.

2.40 (b) (2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

A female Boston Terrier, "Sandy", USDA tag no. 189, was seen holding her left hind leg up off the ground while standing and moving. Licensee stated that the dog had cut her foot while running and playing in an outdoor enclosure. Physical examination of the bottom of the dog's foot revealed that the pad of one toe had a deep laceration running down the middle of it. The licensee had isolated this dog from other animals and was self-treating the wound with Vetericyn spray and Nitrofurazone. This dog has not been evaluated by a licensed veterinarian. Lacerations can cause pain and discomfort to the dog as well as lead to other health problems. This dog must be evaluated by a licensed veterinarian for proper diagnosis and treatment plan. This diagnosis and treatment plan must be documented and made available to the inspector upon request.

Deep laceration in toe pad.
No Vet care.

Correct by: May 08, 2015

3.1 (c) (i) (ii)

HOUSING FACILITIES, GENERAL.

In one outdoor enclosure containing two dogs, the back wall of the enclosure is constructed of sheets of metal. One of the pieces of metal has broken and the edges are bent into sharp points and jagged edges at the level of the dogs. Sharp points and jagged edges could pose an injury risk to the dogs. All enclosures must be kept free of sharp points and jagged edges that may injure the dogs.

Metal wall broken bent w/ sharp jagged edges

Correct by: May 18, 2015

3.1 (f)

HOUSING FACILITIES, GENERAL.

In one outdoor enclosure containing two dogs, the floor is constructed of concrete. This concrete has cracked and broken resulting in a large hole in the flooring and this hole is full of water from recent rains. Standing puddles of water in the enclosures may result in the dogs becoming wet. Standing puddles of water must be drained or mopped up so that the dogs remain dry.

• concrete flooring cracked Lg. hole full of water.

2.40 (b) (2)

REPEAT DIRECT NCI

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

***An adult male Dachshund (m/c# 068 055 353) had a buildup of hard brown material on its upper molar teeth and canine teeth. The gums around the canine teeth had receded away from the teeth. The gums were red and swollen around the canine teeth. A small amount of white material was in the area where the gums met the right canine tooth. The inside of the upper cheek was roughened in the area that covered the right canine tooth. The dog was reluctant to allow his mouth to be touched. Teeth and gum problems can be painful, can affect the animal's ability to eat, and can result in tooth loss. The licensee must have this dog examined by a veterinarian and must establish an effective program of dental maintenance.

***An adult female Dachshund (m/c# 481 050 5F5D) was occasionally holding her left front foot off of the ground when standing. Upon examination, there were no visible signs of a problem; however, the dog winced and jerked its left front paw away in pain when the paw was touched. Lameness problems can be painful and can progress if not treated. The licensee must have this dog examined by a veterinarian for diagnosis and treatment.

3.4 (b) (4)

OUTDOOR HOUSING FACILITIES.

The dogs in the outdoor facility did not have adequate bedding. The ambient temperature at the time of the inspection was 40 degrees F with temperatures falling below 35 degrees F at night. The shelters had a small amount of hay, but not enough for the temperatures that the dogs were being exposed to. Adequate clean, dry bedding is necessary to protect the dogs so that they are not in discomfort or at risk for temperature-related health problems. The licensee must ensure that each dog has access to a shelter with bedding when the ambient temperature falls below 50 degrees and must provide additional bedding when the temperature is 35 degrees F or lower.

TO BE CORRECTED JANUARY 05, 2016.

INADEQUATE
BEDDING
IN 40°F
temperatures

The inspection and the exit briefing were conducted with the licensee.
